

# New! – At last a cost effective, sophisticated and stylish Prepayment Option for Community Heating Systems

**A**cross the UK, Housing Associations and developers have been enjoying the benefits of Prepayment & Billing Solutions Ltd.'s new VersionR range of prepayment devices. Units that draw upon years of experience running and operating a Community Heating Scheme have driven the development and functionality of the new VersionR range.

The range, which starts at less than £200 per unit, offers both users and operators a comprehensive range of standard features and functionality, not normally available at the price. Supported by PBS' user 'top-up' facilities - Pay Point with more than 27,000 high street outlets, On-line payments, automated 24/7 telephone payments, tenant standing orders, and soon to be added mobile phone apps - means users can add credit at any time of the day or night. The back-lit multi-function display and LED indicators clearly informs users of their remaining credit and system status. Other standard features include not just an emergency credit facility, but also the ability to have user friendly 'anti-disconnect' periods which allow operators to set the operational functionality they want for their schemes users. The VersionR+ adds the latest wireless AMR and secure, enhanced communications to provide reliable comms in even poor

reception areas. With the direct keypad input it means users are always able to access the credit they have paid for. Remote comms allows for reduced customer site visits which saves both operational costs and user disruption.

Designed to be easily installed into both new build and retro fit installations, the VersionR range is the ideal complement to our existing WPM prepayment/AMR/smart meter units. These market leading products are already installed in many schemes with thousands of units in operation. Providing revenue protection by reducing the energy supplier's credit risk, our systems are also helping to recover any pre-existing account arrears, thus improving cash flow and scheme efficiency.

Whether it's scheme utility billing or the collection of existing account arrears with the UK's most comprehensive range of prepayment devices for community heating schemes, PBS has a solution for you.

For further details on the VersionR range, the WPM or scheme utility invoicing please call 01623 675300 or for more information visit [www.pbsolutionsltd.co.uk](http://www.pbsolutionsltd.co.uk)
